

# Usability Testing: Wire Frames

---

## Overview

As we designed the user experience, we invited users to review wireframes and provide feedback. Specifically, we tried to understand whether users thought the flow of the application and foundational interactions were intuitive. Summary level notes from these sessions are provided below.

---

## Notes

### **What is this site about?**

- Users had no issues determining the purpose of the application based on the preliminary information provided on the landing page

### **How would you go about registering for an account?**

- Users had no issues finding the signup button

### **How would you go about editing your profile?**

- Users were able to find the “edit” icon on the “My Profile” screen
- Users wanted to know why Year wasn’t included for the “Due Date” of pregnant family members
- Users said that “Pregnancy” should be conditional based on gender selected

### **How would you add a new drug to your cabinet?**

- Users were able to find the “+” button on the “My Cabinet” page
- Users assumed that the search would respond with results from the FDA API

### **What do you think the mobile experience will be like?**

- Overall good. Users wanted to know if the search field would always be visible when browsing drugs in the cabinet on a mobile device

### **How would you expect to view details for a particular drug in your cabinet?**

- Users assumed that clicking/tapping on the drug tile would bring them to a details screen

### **How would you logout of the system?**

- Users identified a possible flaw in the wires, where the logout process was not obvious
- We are modifying visual design to incorporate a more intuitive logout process

### **General Comments**

- Users were able to determine functionality within reasonable time frames
- With respect to application flow, users had positive feedback to the user experience
